

Noble® Compliance-Ready Solutions Simplify Compliance. Boost Your Bottom Line.

With on-staff compliance experts and more than a dozen compliance patents, it's clear why Noble leads the market in helping companies manage calling regulations and risk around the world without sacrificing productivity. Imagine the impact our tools can have on your efficiency, quality and bottom line.

Now, more than ever, it is important for companies to be in compliance with industry regulations, including recent court rulings. Noble Systems has been providing contact centers with proven solutions for Customer Contacts, Workforce Management, and Analytics for over 30 years. Founded by a former call center operator, we understand the challenges that these organizations face every day. We are a leader in delivering compliant solutions, with compliance experts on staff and a number of patents for exclusive compliance technologies.

Noble's Compliance-Ready Contact Solutions provide innovative, state of the art toolsets, delivering features, reports, and tools to help you manage your operations in accordance with government legislation and industry guidelines around the world. From FCC TCPA criteria for wireless calling and automated dialing, to PCI-DSS and GDPR regulations for data privacy and security, and a range of other regulatory statutes – including FDCPA, FTC, TSR, TCPA, PCI, HIPAA, Ofcom, ACMA, and more – we'll help you reduce risk and reach your contact goals.

Lock-down Rules

Noble's "Lock-down" Compliance Appliance Server is set so that it cannot be modified or enhanced to store lists or to generate random or sequential numbers, allowing separation of automated and manual dialing.

Wireless Number Dialing

The patented Compliance Appliance addresses TCPA Wireless Number dialing rules, while also screening records for other FCC and calling regulations. In addition, our industry-leading Best Time to Call tools can help predict the optimum time to dial a wireless number to get the best result, segregating landline numbers that are automatically dialed and wireless numbers that are manually dialed into separate queues for improved management.

DNC & Opt-Out/Consent Lists

DNC list management and dynamic list scrubbing, plus opt-out mechanisms and consent tracking that automatically updates global tables.

Abandon Call Rates

Noble manages a 3% abandon call cap with a 'governor' for pacing management and hold messages. Noble can also set a minimum number of rings per call and bridge announcements to span the interval before the agent gets the call, as well as the ability to play an abandon message in the event that the thresholds are breached.

Calling Hours

Noble allows users to specify time windows for campaign dialing, at the customer's country, state, area code, or exchange level, with holiday overrides.

Record With Consent

Stereo recording allows customer audio to be turned off when consent isn't given, while retaining the agent-side recording.

ANI Broadcasting

Sophisticated utilities to display and manipulate the ANI (or Calling Line ID) that is broadcast with the outbound call at a campaign level, and even on a per call level.

Data Security

Multi-level security protects your sensitive customer data, with user-defined permissions and role-based access down to the field level. Our secure payment tools keep confidential data safe. Encryption at rest, server hardening, advanced password management, and secure-level support options can be used as a part of your overall business compliance practices.

FEATURES

- ✓ Compliance tools for PCI-DSS, DNC Registries, TSR, TCPA, FDCPA, HIPAA, Ofcom, ACMA, GDPR, HIPAA, and more
- ✓ Patented Compliance Appliance® for wireless number dialing
- ✓ Compliance dialing lockdown to manage abandon rate caps
